

SCHATEX

CARING FOR YOUR CARPET TILE

Dear Customer,

Thank you for chosen to purchase your carpet tiles from us here at SCHATEX. We hope that you will have many years of use and enjoyment out of your purchase. SCHATEX carpet tiles are designed to be low-maintenance, and keeping your carpet tile clean is relatively simple, but for larger stains and dirt we have compiled a simple set of cleaning directions.

Thanks to the modern technical properties employed in the manufacturing process, cleaning and care have been reduced to a minimum. For general dirt and dust, a regular vacuum clean will suffice.

Liquid spills can be soaked up by placing a paper towel over the spill area, and pressing firmly. To remove the excess stain residue, you can lightly scrape it away. If required, the carpet tile can be lifted and cleaned with warm water using a sponge. If the stain persists, then a mild cleaning detergent can be used, and the spot can be lightly brushed. A paper towel can be used to soak up the excess water. Before replacing your carpet tile, it is very important that the tile is completely dry. We strongly recommend that you allow the tile to dry naturally, and do not use a radiator when drying, as this will severely damage the tile.

If you should require and further advice about cleaning or caring for your SCHATEX carpet tile, you can simply contact us by the number below, or via email. Where our team will be ready to deal with any question you may have.
