Cleaning and care – natural oil-treated wood surfaces

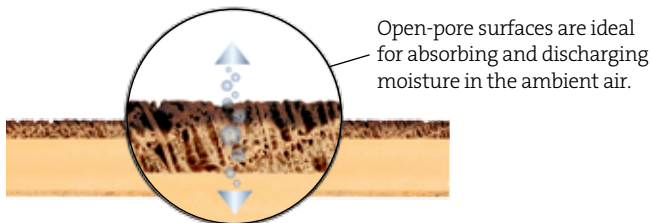

For more useful information regarding our care products, please go to our website www.terhuerne.de/cleaning

Your local ter Hürne dealer will be happy to advise you.

Open to healthy living

ter Hürne applies natural oil to enhance the high-quality, particularly matt appearance of the wood and to intensify the tangible impression of originality. Open-pore natural oil-treated surfaces promote the exchange of humidity in a room and create a balanced and healthy room climate. Natural oil-treated floors can be refreshed from time to time or even partially or completely re-oiled, if necessary.

NATURAL OIL

Guaranteed quality

Cared for correctly, you can see and feel that natural oil-treated floors by ter Hürne improve the quality of life. To clean your floor, only use the special ter Hürne cleaning products, which are available from your local stockist.

Please follow the care instructions and information provided. We then guarantee you an especially long life for your floor.

Get the best from your floor for longer

- Create a healthy room climate with 40 - 60% relative humidity and a temperature of around 20 degrees.
- Protect your floor by placing protective mats in the entrance to the room in order to collect large particles of dirt immediately and stop them coming into contact with your floor at all.
- Place felt gliders underneath moveable furniture. Only use soft castors (EN 12529 Type W).
- Protect your floor by avoiding high point loads (i.e. high heels) and scratches (i.e. pet claws).
- If a warm water underfloor heating system is installed, the surface temperature must not exceed 29 degrees.
- Only use a brush, vacuum cleaner or moist, wrung-out cloth for cleaning. Do not use steam cleaner (212°F, 100°C). Avoid leaving water standing on the floor.
- Do not use any oil or wax during cleaning.

Regular mopping – permanent cleanliness maintains value

Remove stubborn dirt, which can adhere to the floor during normal daily use with regular cleaning using the ter Hürne Conditioning Concentrate.

Application: First remove loose dirt with a brush/vacuum cleaner. For regular cleaning, depending on how dirty the floor is, dilute 100ml cleaner concentrate in 5 litres water. Wipe the floor with a moist, well wrung-out cloth only. Always wipe along the planks lengthways. Do not use microfibre cloths. Do not rinse off with water. Do not walk on the floor until it is completely dry (which takes about 30 minutes).

Tip: Use a second bucket with clear water to periodically clean your mop whilst washing the floor.

Content 250 ml

Experience your floor like on day one – refreshing the whole floor

The ter Hürne Intensive Conditioning Oil restores the protection and the appearance of the entire floor.

Application: Sufficient for approx. 75 – 100 sqm depending on the amount of traffic. Shake bottle before use. Clean the surface thoroughly using ter Hürne conditioning concentrate. Rinse with clean water to remove all traces of concentrate. Leave the surface to dry. Use a cloth or sponge to apply the intensive conditioning oil to sections measuring about 2 - 4 sqm. Use the intensive conditioning oil very sparingly to avoid the floor becoming sticky. Each treated section must be rubbed dry with paper towels within 10 - 15 minutes. A polishing machine is best used with a lintfree cotton cloth. Ensure sufficient ventilation for the floor to dry thoroughly. This will take about 6 hours. Finally, rub the floor with a dry, lint-free cotton cloth. After 48 hours, the floor can be cleaned with a slightly damp cloth. Please do not use soap. After a week, water and conditioning concentrate can be used to clean the floor.

Note: If traffic is exceptionally high, the surface should be renewed by a qualified parquet flooring expert if at all possible.
